

## K Series BASO® Thermocouples

*The K Series Thermocouples are designed for use in standing pilot ignition systems. They are used primarily with BASO brand automatic pilot controls and pilot burners; however, many models are interchangeable with thermocouples made by other manufacturers.*

*BASO Gas Products thermocouples are built to provide reliable performance and designed to simplify installation. Various constructions and lengths are available.*

**K Series Thermocouples**

Features and Benefits	
<b>High-Performance Inner and Outer Element Material</b>	Provides maximum output capacity
<b>Built-in Junction Block (Optional)</b>	Allows for the addition of a high limit switch in the thermocouple circuit
<b>Nickel Plating (Optional)</b>	Provides high ambient and corrosive atmosphere protection

## Description

A thermocouple is constructed of two dissimilar metals, one is a solid element, and that is surrounded by a second, tubular-shaped piece. These metal elements touch only at a single welded endpoint. This endpoint, commonly known as the “hot” junction, is the tip of the thermocouple heated by the pilot flame (see Figure 1 or 2).

The outer element is brazed to a brass connector sleeve attached to a copper tube, or is welded directly to a copper tube. Inside the copper tube is an insulated copper wire that is welded to the inner element of the thermocouple. This welded joint, together with the brazed joint between the copper tube or brass connector and the outer thermocouple element, forms the “cold” junction of the thermocouple (see Figure 1 or 2).

When there is a large temperature differential between the hot and cold junctions, an electrical current is generated. In its operating range, the electrical energy created is directly proportional to the temperature differential between the hot and cold junctions. The electrical output of a thermocouple is small (measured in millivolts) and the response time is slow (normally 30 to 45 seconds).

Care must be taken when applying a thermocouple to an appliance. Only a large temperature differential between the hot and cold junctions will create a useful millivolt output. The thermocouple should be positioned with 0.5 in. (12.7 mm) of its tip in the pilot flame. The cold junction should not be subjected to any large amounts of ambient heat. The lead should be routed away from the heat of the pilot and main burners. Electrical resistance increases with lead length, and will create a noticeable power drop.

## Junction Block Thermocouples

K16F and K16J junction block thermocouples have a built-in junction block, which allows for the connection of the high limit switch. This type of application places the power unit of the pilot control in series with the limit switch and thermocouple so that all gas to the appliance will be shut off if pilot flame failure occurs or the high limit switch opens.

The correct length of the wire for connecting the limit switch to the junction block is determined by several factors: the size of the wire, the wire temperature, the thermocouple lead length, the power unit type, and the distance between the limit switch and the junction block. The junction block is 3.546 in. (90 mm) from the terminal end of the thermocouple for the K16F model and 2.343 in. (60 mm) for the K16J model.

## Ordering Information and Application Specifications

**K14 Series Thermocouple**

Lengths available in 14 in. (356), 36 in. (914 mm)  
or 72 in. (1,829 mm)

### K14 Ordering Matrix

**Table 1: K14 Application Specifications**

Resistance in Ohms (18" Length): 0.0134
Open Circuit Millivoltage Range (Pilot Flame): 20-28 mV
Open Circuit Millivolt Range (Catalytic Heat): 12-18 mV
Maximum Hot Junction Temperature: 1400°F (760°C)
Maximum Cold Junction Temperature: 850°F (454°C)
Maximum Copper Tube Temperature: 640°F (338°C)
Maximum Termination Temperature: 300°F (149°C)

### K15DA Standard and K15FA Snap-in Thermocouple

Many lengths (normally in 6 in. [152 mm] increments) are available in 12 to 48 in. (305 to 1,220 mm), but the length should be kept to a minimum.

The presence of a particular construction in this information does not guarantee its availability. Consult BASO Gas Products for available constructions.

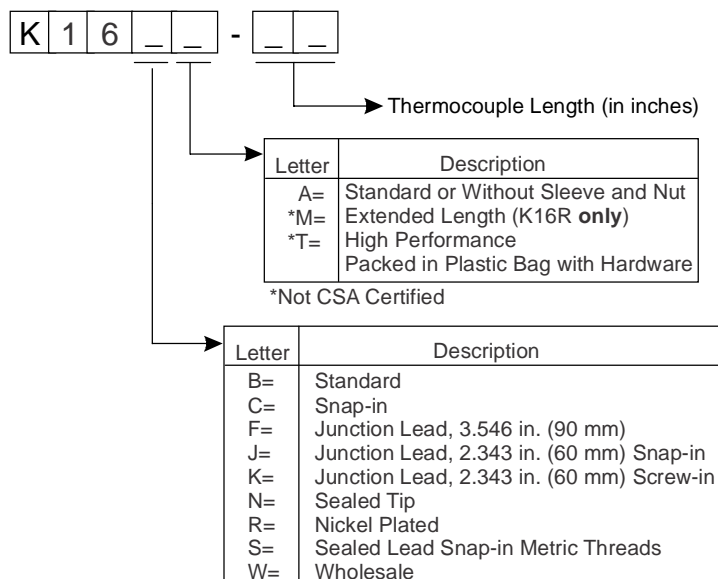

### K15 Ordering Matrix

**Table 2: K15 Application Specifications**

Resistance in Ohms (18" Length): 0.0134
Open Circuit Millivoltage Range: 20-28 mV
Maximum Hot Junction Temperature: 1500°F (816°C)
Maximum Cold Junction Temperature: 850°F (454°C)
Maximum Copper Tube Temperature: 640°F (338°C)
Maximum Termination Temperature: 300°F (149°C)

### K16BA Standard and K16FA Junction Lead Thermocouple

Many lengths (normally in 6 in. [152 mm] increments) are available in 12 to 72 in. (305 to 1,829 mm), but the length should be kept to a minimum.

The presence of a particular construction in this information does not guarantee its availability. Consult BASO Gas Products for available constructions.

### K16 Ordering Matrix

**Table 3: K16 Application Specifications**

Resistance in Ohms (18" Length): 0.0184
Open Circuit Millivoltage Range: 25-35 mV
Maximum Hot Junction Temperature: 1500°F (816°C)
Maximum Cold Junction Temperature: 850°F (454°C)
Maximum Copper Tube Temperature: 640°F (338°C)
Maximum Termination Temperature: 300°F (149°C)

### K17AT Universal Thermocouple

Many lengths (normally in 6 in. [152 mm] increments) are available in 18 to 72 in. (305 to 1,829 mm), but the length should be kept to a minimum.

The presence of a particular construction in this information does not guarantee its availability. Consult BASO Gas Products for available constructions.

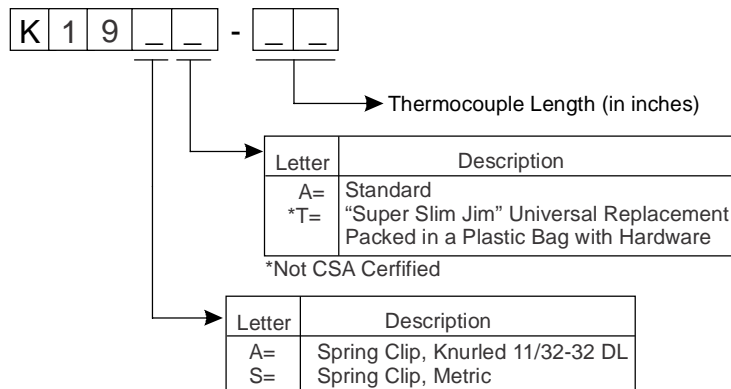

### K17 Ordering Matrix

**Table 4: K17 Application Specifications**

Resistance in Ohms (18" Length): 0.056
Open Circuit Millivoltage Range: 30-40 mV
Maximum Hot Junction Temperature: 1300°F (704°C)
Maximum Cold Junction Temperature: 626°F (330°C)
Maximum Copper Tube Temperature: 392°F (200°C)
Maximum Termination Temperature: 230°F (110°C)

### K19AT Standard and K19SA Metric Thermocouple

Many lengths (normally in 6 in. [152 mm] increments) are available in 18 to 78 in. (247 to 1,981 mm), but the length should be kept to a minimum.

The presence of a particular construction in this information does not guarantee its availability. Consult BASO Gas Products for available constructions.

### K19 Ordering Matrix

**Table 5: K19 Application Specifications**

Resistance in Ohms (18" Length): 0.0134
Open Circuit Millivoltage Range: 25-35 mV
Maximum Hot Junction Temperature: 1300°F (704°C)
Maximum Cold Junction Temperature: 850°F (454°C)
Maximum Copper Tube Temperature: 640°F (338°C)
Maximum Termination Temperature: 300°F (149°C)

## Accessories

Y99AN-1H

Y99AN-17H

### Y99AN Series Junction Block

#### Description

Y99AN Series junction blocks are used for high limit or sprill switches. The use of this junction block will put the power unit in series with the switch and thermocouple so the gas valve's thermoelectric device will shut off when a pilot flame failure occurs and the switch opens.

Y99AL-1H

### Y99AL Test Couple

#### Description

The Y99AL test thermocouple is a quick way to test thermoelectric valves for proper function.

Part Number	Description	Length	Thread
 <b>27532-4000H</b>	Snap Ring Clip	.460 in.	Fits .325 Diameter Hole
 <b>31543-3H</b>	Terminal Nut	.531 in.	Transition Female 7/16-27 to 11/32-32 Thread
 <b>38323-2H</b>	Lead Adapter	.594 in	1/2-24 Thread
 <b>61659-1H</b>	Thermocouple Adapter Assembly	.985	Transition Male 7/16-27 to 11/32-32 Thread
 <b>ADP4000-2H</b>	Lead Adapter	1.065	7/16-27 Thread
 <b>BSG73-4000H</b>	Bushing Adapter	.250 in.	.244 in. Diameter

## Technical Specifications

<b>Product</b>	K Series Thermocouples
<b>Types of Gas</b>	Natural, Liquefied Petroleum (LP), manufactured, mixed, or LP gas-air mixture
<b>Operating Temperature</b>	K14: -40 to 1400°F (-40 to 760°C) K15: -40 to 1500°F (-40 to 816°C) K16: -40 to 1500°F (-40 to 816°C) K17: -40 to 1300°F (-40 to 704°C) K19: -40 to 1300°F (-40 to 704°C)
<b>Storage Temperature</b>	-40 to 176°F (-40 to 80°C)
<b>Packaging</b>	Bulk pack supplies to original equipment manufacturer, (individual pack optional)
<b>Bulk Pack Quantity</b>	100
<b>Bulk Pack Weight</b>	Varies due to the different lengths of leads
<b>Agency Listings</b>	CSA Certificate Number 229521-1656071 (see matrices on pages 4 through 8)
<b>Specification Standards</b>	ANSI Z21.20

*Performance specifications are nominal and conform to acceptable industry standards. All agency certification of BASO products is performed under dry and controlled indoor environmental conditions. Use of BASO products beyond these conditions is not recommended and may void the warranty. Product must be protected if exposed to water (dripping, spraying, rain, etc.) or other harsh environments. The original equipment manufacturer or end user is responsible for the correct application of BASO products. Consult BASO Gas Products LLC for questionable applications.
